**Redus** Aug 01, 5:28 AM

Hi, how are you?

I'm looking for a Cosmos/Osmosis blockchain developer.

The previous Fiverr developer did not complete the work correctly. The airdrop reserve is linked, but it cannot broadcast transactions to the Osmosis blockchain. As a result, the airdrop transactions are not visible on the blockchain or in the block explorer.

Can you investigate the issue and make the airdrop transactions broadcast correctly so they become visible and confirmed on the Osmosis blockchain? in 2 - 4 days

This message relates to:

I will be blockchain developement react web3, smart contract, dapp, wallet integration

Botswapred... (543.52 kB)

**Me** Aug 01, 5:32 AM

Hello Redus,

Thanks for choosing me to assist you.

Yes, I can investigate the issue with your Cosmos/Osmosis airdrop system.

Could you share the source code for the airdrop system so I can review the current implementation?

Which wallet or signing method are you using to broadcast transactions?

Looking forward to hearing from you asap.

Regards,
Hasibul

**Redus** Aug 01, 12:28 PM

keplr

**Me** Aug 01, 12:29 PM

Thanks for your response.

**Me** Aug 01, 12:34 PM

Thanks for sharing.

Please give me some time to review it.

Please stay with me.

**Me** Aug 01, 1:15 PM

I've investigated the issue, and I know exactly what needs to be done to make the airdrop transactions broadcast correctly to the Osmosis blockchain and appear in the block explorer.

What I'll deliver:
Airdrop transactions visible and confirmed on the Osmosis blockchain

Transactions showing in the block explorer (Mintscan)

Timeline: 15 days Budget: $ 500 USD (not fixed)

One thing I need from you before I start: Please top up the treasury wallet (osmo18m3pl3jl8wmnvckf3a02ydqygxx0m2tfzky5qg) with at least 10 OSMO for gas fees. It currently has only 0.93 OSMO remaining. Without this, transactions cannot be sent.

I'll share a live Mintscan link as proof of the first successful on-chain airdrop before marking the milestone complete.

Ready to start immediately if you are okay with the budget and timeline.

**Redus** Aug 01, 1:19 PM

50 - 230$

**Redus** Aug 01, 1:19 PM

2 - 4 days

**Me** Aug 01, 1:24 PM

Could you please increase your timeline to 10 days?

If you agree with 10 days, I can go with your budget of $ 230 USD.

Waiting for your response.

**Me** Aug 01, 1:34 PM

Hello Redus,

Are you there?

If you can give me 10 days, it will be better for me, but if you stick to 4 days, no worries, I'll do it for you.

Please tell me which is suitable for you, i'll send the custom offer to start the project.

Waiting for your response.

**Redus** Aug 01, 1:35 PM

Time is short because there's only one airdrop

**Me** Aug 01, 1:36 PM

Okay.

Shall i send you the custom offer to start the work?

**Redus** Aug 01, 1:40 PM

10th - 15th

**Me** Aug 01, 1:41 PM

Replied

error blockc... (2.96 kB)

**Me** Aug 02, 8:55 PM

Okay, let me check and get back to you asap.

**Me** Aug 02, 9:30 PM

Hello,

I have a few quick questions to better understand the requirements:

- Should the airdrop be processed as a real on-chain transaction, or is it intended to remain a mock/internal transfer?
- How is admin authorization currently handled for initiating transfers from the reserve?
- Is the treasury wallet (mnemonic/private key and RPC endpoint) already configured and ready for blockchain transactions?
- If the reserve balance is insufficient, should the transaction fail, or should the system automatically mint/fund the required tokens?
- Should we continue supporting the legacy endpoint, or should we use only the new endpoint going forward?

Once I have these details, I'll be able to proceed with the implementation more efficiently.

Thank you

**Redus** Aug 02, 9:36 PM

internal and fictitious, is never planned, everything must be real and broadcast in blockchain

Yes

I don't think so; the previous salesperson didn't do their job properly.

system automatically mint/fund the required tokens

Regardless of the purpose, does the Airdrop have to be real?

**Me** Aug 02, 9:53 PM

Okay, let me check and get back to you soon.

**Me** Aug 02, 10:33 PM

As it is late at night here.

I will review everything and give you an update tomorrow morning.

I appreciate your patience.

**Me** Aug 03, 8:40 AM

**Me** Aug 03, 2:25 PM

Hi Redus,

We have thoroughly reviewed the error report you provided and conducted a full analysis of the existing codebase.

Our findings confirm the issues you identified, and we have also uncovered several additional gaps that were not immediately visible but are directly contributing to the platform not functioning in a production-ready state.

We have prepared a detailed technical audit summarising every issue found — including the airdrop, reserve system, token infrastructure, database persistence, and blockchain connectivity — along with a clear priority list of what needs to be resolved.

Please find the full report attached. We encourage you to go through it carefully and let us know if you have any questions or if anything needs further clarification.

We are fully committed to resolving every issue you are facing and delivering a production-ready system where all operations broadcast correctly to the Osmosis blockchain with a full persistent audit trail.

Looking forward to your feedback.

**Redus** Aug 06, 12:50 PM

I have already examined it. Is there something I missed?

**Me** Aug 06, 12:51 PM

No, you haven't missed anything.

**Me** Aug 06, 12:52 PM

Could you please tell me, are you intrested to fix all these things?

**Redus** Aug 06, 12:54 PM

The priority to fix is AirDrop; AirDrop is currently in simulation mode, meaning it is virtual and not broadcast on the blockchain.

**Me** Aug 06, 1:03 PM

Absolutely, we can definitely fix this.

We have already analyzed the airdrop module in depth and confirmed the exact cause — it is currently running in simulation mode and not connected to the blockchain broadcast layer. This is a targeted fix and we are fully confident in resolving it.

Once the airdrop is fixed, here is what you will be able to do:

- Send real airdrop transactions that are broadcast directly to the Osmosis blockchain
- Every airdrop will generate a real transaction hash
- All transactions will be visible and confirmed in the block explorer (Mintscan)
- Recipients will receive the tokens directly in their wallets on-chain
-The admin panel will display a live link to each confirmed transaction after sending
Tokens covered by this fix:

vOSMO — fully supported, real Token Factory denom active on Osmosis mainnet

vPEPE — fully supported, real Token Factory denom active on Osmosis mainnet

This is precisely what the system was designed to do, and we will make sure it works exactly as expected.

**Redus** Aug 06, 1:05 PM

What about the Good and Reserve tokens? The airdrop is linked to this reserve, based on that.

**Me** Aug 06, 1:08 PM

Yes, the fix fully covers this.

The reserve is the treasury wallet that holds the vOSMO and vPEPE tokens on-chain. The airdrop fix works by sending directly from that treasury reserve to the recipient's wallet — exactly the flow you described.

After the fix:

- The reserve (treasury) holds real vOSMO and vPEPE on Osmosis
- Every airdrop sends from that reserve to the recipient on-chain
- The reserve balance decreases with each real airdrop sent
- The transaction is confirmed and visible on Mintscan

Both vOSMO and vPEPE are supported through this reserve-based airdrop flow.

**Redus** Aug 06, 1:08 PM

**Me** Aug 11, 7:35 AM

Hi Redus,

Hope you are doing well.

I've sent you the custom offer again, so you don't have to scroll up and accept the offer.

You can accept the offer from here now.

Please accept the offer so that i can start the work immediately.

**Redus** Aug 11, 2:10 PM

I haven't gotten my p. ayday yet, it's between 10 and 15. It's nice to see your message.

**Me** Aug 11, 2:27 PM

Okay, take your time.

I'll wait for you to accept the offer and start the work.

Have a good day brother.

**Redus** Aug 13, 3:43 PM

Hi, how are you? I received a partial refund a few days ago, but it falls short of the fixed price you quoted—I'm $30 short of covering the full amount. I wanted to know if you could offer a $30 discount to get the project started, with the balance paid a few days after completion 50$, or if you'd prefer to wait until I get paid.

**Me** Aug 13, 3:49 PM

So, you would like me to reduce the offer from $230 to $200, with the remaining $50 to be paid a few days after the project is completed, correct?

**Redus** Aug 13, 3:51 PM

yes sir

Translate to English

**Me** Aug 13, 3:58 PM

Okay sure, let me talk with my team and I will get back to you with an update soon.

**Redus** Aug 13, 3:58 PM

thank you bro

**Me** Aug 13, 4:07 PM

You are most welcome.

**Redus** Aug 13, 4:08 PM

Once you accept, can you send me an offer?

**Me** Aug 13, 4:10 PM

Yeah sure, I will send you.

**Me** Aug 13, 4:15 PM

Here's your custom offer

**I will do full stack website design, development and build custom business website** **$200**

Hello Redus,

**Your offer includes**

4 Days Delivery

View order Offer accepted

**Me** Aug 13, 4:17 PM

Please accept the offer so that we can get started.

**Redus** Aug 13, 4:18 PM

Once I accept your offer and the project is completed, I will need to see a video demo of the bot, along with the instructions I will provide here.

**Redus** Aug 13, 4:19 PM

is okay for you ?

**Me** Aug 13, 4:22 PM

Yes, just to clarify, are you referring to adding new features based on the instructions you'll provide, or is the video demo only to show the completed bot working according to the current requirements?

**Redus** Aug 13, 4:26 PM

video demo only to show the completed bot working according to the current requirements

**Redus** Aug 13, 4:27 PM

That's why I need to send you the instructions to follow to check the bot's status.

**Redus** Aug 13, 4:28 PM

is okay for you ?

**Me** Aug 13, 4:29 PM

Yes, no worries at all.

I can do that. I'll make sure the completed bot is demonstrated according to the instructions you provide.

**Me** Aug 13, 4:29 PM

You just need to accept the offer.

**Redus** Aug 13, 4:31 PM

no problem bro

**Me** Aug 13, 4:41 PM

Thanks for accepting.

**Redus** Aug 13, 4:55 PM

Once the project is complete, here are the instructions for the demo video to verify the bot:

1. Show your wallet (Keplr).

2. Check the vPEPE token reserve (Quarkbot admin page).

3. Add 50 vPEPE tokens to the reserve (Quarkbot admin page).

4. Perform an airdrop of 50 vPEPE tokens to your vPEPE address (Quarkbot admin page).

5. Convert vPEPE to PEPE(LVN) (Quarkbot users page).

6. Show your wallet (Keplr) to verify receipt of the LVN tokens following the conversion.

**Redus** Aug 13, 5:00 PM

for add LVN token in your wallet kelpr , here denom LVN :
factory/osmo1mlng7pz4pnyxtpq0akfwall37czyk9lukaucsrn30ameplhhshtqdvfm5c/ulvn

**Redus** Aug 13, 5:01 PM

or factory/osmo1mlng7pz4pnyxtpq0akfwall37czyk9lukaucsrn30ameplhhshtqdvfm5c/ulvn

**Me** Aug 13, 5:01 PM

Okay when we start, I will give you an update.

**Redus** Aug 13, 5:02 PM

thank you bro

**Redus** Aug 13, 5:02 PM

I'm going out to work and I'll be back late.

**Me** Aug 13, 5:14 PM

Yeah sure, no worries.

**Redus** Aug 13, 5:49 PM

1. Show your wallet (Keplr).

2. Check the vPEPE token reserve (Quarkbot admin page).

3. Add 50 vPEPE tokens to the reserve (Quarkbot admin page).

4. Airdrop 50 vPEPE tokens to your vPEPE address (Quarkbot admin page).

5. Convert vPEPE to PEPE(LVN) (Quarkbot users page).

6. Redem PEPE (Quarkbot users page).

7. Show your wallet (Keplr) to verify receipt of your LVN token after conversion.

Capture d'é... (152.17 kB)

**Me** Aug 13, 5:50 PM

Thanks for sharing, regarding this I will review everything and get back to you with an update soon.

Thanks for your patience.

**Redus** Aug 14, 3:34 PM

hi how are you ?

**Me** Aug 14, 4:03 PM

Hi,
To proceed with the on-chain airdrop delivery, the treasury wallet requires a small amount of real OSMO. Every blockchain transaction — including minting or sending vOSMO/vPEPE — requires a network gas fee paid in native OSMO, separate from the tokens being transacted. The treasury currently holds vOSMO and vPEPE, but no native OSMO, so it isn't yet able to pay for its own transactions.
Could you please send 2–3 OSMO to the treasury address below:

osmo18m3pl3jl8wmnvckf3a02ydqygxx0m2tfzky5qg

This covers gas for the airdrop with a comfortable buffer, at a cost of a few dollars.

Separately, the treasury currently holds approximately 0.12 real LVN — the asset vPEPE redeems into for steps 5–7 of the demo. Redeeming a larger amount than that would fail due to insufficient LVN balance, independent of the airdrop functionality. If you'd like to top this up, it goes to the same treasury address above (LVN isn't a separate wallet — just a different token held in the same account); the LVN denom is:

factory/osmo1mlng7pz4pnyxtpq0akfwall37czyk9lukaucsrn30ameplhhshtqdvfm5c/ulvn

Alternatively, if a full-size redemption isn't needed for the demo, we can use a smaller redemption amount instead and skip this top-up.
Once the treasury is funded, I'll proceed with the live delivery.

Best regards,

Image.png (75.07 kB)

**Redus** Aug 14, 4:13 PM

bro you can add 5$

**Redus** Aug 14, 4:14 PM

to make it quick

**Me** Aug 14, 4:19 PM

Thank you bro..

**Redus** Aug 14, 7:38 PM

There is already Osmos.

**Me** Aug 14, 7:41 PM

Okay,,

**Redus** Aug 14, 8:30 PM

I will contact you this evening to check on progress.

**Me** Aug 14, 8:31 PM

Okey, I am waiting for your message.

**Me** Aug 14, 10:42 PM

Hi,

Confirming the OSMO funding came through — the treasury now shows ~90 OSMO, more than enough gas for the airdrop delivery. Thank you for that.

The one remaining gap is LVN (what vPEPE redeems into for steps 5–7). The treasury currently holds only ~0.12 LVN, which isn't enough for a clean demo redemption. Would it be okay to top this up to around 5 LVN? That's a small, low-cost amount but gives us a more presentable number to redeem on camera than a fraction of a token.

Same treasury address as before:osmo18m3pl3jl8wmnvckf3a02ydqygxx0m2tfzky5qg
LVN denom:factory/osmo1mlng7pz4pnyxtpq0akfwall37czyk9lukaucsrn30ameplhhshtqdvfm5c/ulvn
Let me know if 5 LVN works on your end, or if you'd prefer we just demo with whatever's currently available.

Best regards,
Hasibul

Image - 202... (73.92 kB)

**Redus** Aug 15, 1:41 AM

I haven't received my pay yet, but I covered the cost upfront; could you please have it added on your end to speed things up?

**Me** Aug 15, 1:44 AM

I have shared this with my team members.

I will get back to you soon with an update.

**Redus** Aug 15, 1:45 AM

Please, I've already handled the reinforcement on my end.

**Me** Aug 15, 1:46 AM

Okay, I will get back to you as soon as possible.

**Me** Aug 15, 10:03 AM

Hi Redus,

Good news on our end first: the airdrop fix is complete and confirmed working live on Osmosis mainnet — real transactions, not simulated. Here are two you can check directly:

Reserve link :
https://www.mintscan.io/osmosis/tx/AAAEF95421DD08E4ED2DE14F6B28A49CF01B9EB25228E5689AD433EB323C0509
Airdrop link :
https://www.mintscan.io/osmosis/tx/87BA8A8476363D2D128ADFA4A3A39FE7DCA19AD57170C62351CCE269EFF6AC85
Our wallet :
https://www.mintscan.io/osmosis/address/osmo12zf5yyw9sw4vh6r9kuejqj5etl5thhz8s6yjlf

We've also attached a screenshot of our Keplr wallet from testing , it shows a real 10 vPEPE balance landed there from a live mainnet airdrop, confirming tokens actually reach a wallet, not just an internal ledger.

On the LVN top-up: redemption is a real 1:1 on-chain payout, not a simulated number — redeeming 5 vPEPE sends exactly 5 real LVN out of the treasury, so the treasury has to physically hold whatever

amount we want to show on screen.

That's why we can't just "demo" a bigger number without it actually being funded. Right now the treasury holds 0.1189 LVN, so that's the maximum we can redeem live today — anything above that (e.g. the ~5 LVN for a cleaner demo) needs to actually be sent to the treasury first, plus a small gas fee on your side to send it.

Treasury address: osmo18m3pl3jl8wmnvckf3a02ydqygxx0m2tfzky5qg LVN denom: factory/osmo1mlng7pz4pnyxtpq0akfwall37czyk9lukaucsrn30ameplhhshtqdvfm5c/ulvn

Per Fiverr's policy, costs like this during development/delivery are the client's responsibility, so it'd help speed things along if you're able to cover that top-up. And  if you'd prefer we just proceed with the existing 0.1189 LVN and demo that smaller number instead — no funding needed either way.

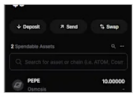

Image - 202... (39.07 kB)

**Redus** Aug 15, 2:52 PM

That means you want to wait for my payday ?

**Me** Aug 15, 3:06 PM

We are actively trying to find an way around.

**Redus** Aug 15, 3:17 PM

i hope the project is coming to an end in a few days, so you need to find a solution.

**Me** Aug 15, 3:29 PM

Do you want to a voiceover in the recording?

**Me** Aug 15, 4:09 PM

Je vous envoie la livraison maintenant. Merci de bien vouloir la vérifier et l'accepter. Merci beaucoup !

**Redus** Aug 16, 1:33 AM

You forgot to include the Mint option in the reserve option.

Capture d'é... (215.06 kB)

**Me** Aug 16, 1:55 AM

I have passed this to my team.

It will be done soon.

**Redus** Aug 16, 2:17 AM

thank you

**Me** Aug 16, 2:31 AM

Welcome

**Me** Aug 16, 9:24 AM

Hi Redus,

Thank you for showing us that page. That page ("Reserve" in the menu) is not part of your order with us.

Here is why: your order was to fix the airdrop bot — the button that sends tokens to a wallet. We fixed that. It now sends real tokens on the blockchain, with proof on Mintscan.

The "Reserve" page you showed us is a different page, with a different button, doing a different job — it just shows total supply numbers, it does not send tokens to a wallet. It is not the airdrop bot. So fixing it was never part of what you ordered from us.

At this stage, we'd like to move forward with the current delivery. Please review the video and confirm your acceptance.

**Me** Aug 16, 2:03 PM

Please review the latest video and let me know if everything looks good from your side.

We'd appreciate your confirmation so we can close the project smoothly.

Thank you

Edited

**Redus** Aug 16, 10:01 PM

Sir please read it... the "reserve" function is already there. You just need to fix the link between the "reserve" function and the blockchain broadcast. You didn't create the airdrop widget—that wasn't part of the conversation we agreed upon. Once this correction is made, I will need to see a new video.
